DETAILED ACTION

Specification

This application does not contain an abstract of the disclosure as required by 37 CFR 1.72(b). An abstract on a separate sheet is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claims 1 and 8, the phrase "or the like" and "etc." renders the claim(s) indefinite because the claim(s) include(s) elements not actually disclosed (those encompassed by "or the like"), thereby rendering the scope of the claim(s) unascertainable. See MPEP § 2173.05(d).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Spranger (DL 0135798). Spranger discloses an automatic fish processor with an adjustable conveyor (9), adjustable as a function of the length and shape of

the fish to be processed (abstract). Spranger further discloses a means for the collection and processing of data (2), required to set the machine depending on the size of the fish (abstract). Spranger also discloses a motor (6) and a spindle (7) for adjusting the angle of the conveyor.

Claim Rejections - 35 USC § 103

Claims 2 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Spranger (DL 0135798) in view of Nordisch (DE 2709152 B1). Spranger discloses all of the features of the invention except a photocell detection means. Nordisch discloses a photocell sensor that is used to determine the length of the fish and that information is used to control tools and guides on a fish processing machine (abstract). Nordisch further discloses that the signals returned are recorded as pulses requiring a microprocessor to guide the tools. It would have been obvious to one having ordinary skill in the art at the time the invention was made to include the electronic sensor of Nordisch with the adjustable conveyor and fish processor of Spranger to increase automation and consistency in the processing of the fish. It is noted that the invention of Nordisch was created specifically to be used with inventions such as Spranger's (abstract).

Claims 3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Spranger as modified in view of Russian Patent (SU 1001-909-A). Spranger as modified discloses all of the features of the invention except a gripping means having pivotal jaw that can be translated in a linear manner. Russian Patent discloses a gripping means as a pivotal jaw for moving a fish through a processing apparatus (abstract). It would have been obvious to one having

ordinary skill in the art at the time the invention was made to include the Russian gripping device with the Spranger as modified device to ensure the positioning of the fish during the processing operation.

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Spranger in view of Hjorth (US 5492502). Spranger discloses all of the features of the invention except a barbed wheel or drum. This is not, however a patentable distinction because adding barbs to a object gripping surface is old and well known and is merely a substitution for one gripping means for another. Hjorth discloses a belt having barbs to hold fish in place on a conveyor for a processing operation. It would have been obvious to one having ordinary skill in the art at the time the invention was made to include the barbs of Hjorth in the device of Spranger in order to facilitate the fish being held on the surface and out of design choice between two alternative equivalent means.

Allowable Subject Matter

Claims 8-11 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Badder (GB 1073779), Sullivan (US 1525699), Evers et al. (US 5591076), Hartl et al. (US 3364514), Rudy et al. (US Re. 33904), and Grabau et al. (US 5871395) disclose similar features of the invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chad Copier whose telephone number is 703-306-0939. The examiner can normally be reached on M-F 8:30 - 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Peter Poon can be reached on 703-308-2574. The fax phone numbers for the organization where this application or proceeding is assigned are 703-305-7687 for regular communications and 703-306-4195 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-1113.
